PaperLens Test Paper

This paper demonstrates selection translation in a local PDF reader.
Select any complete line and DeepSeek will translate it into Chinese.
The application preserves formulas such as y = f(x) and citation [1].

Introduction

Academic reading improves when unfamiliar sentences can be translated quickly.
The original page remains unchanged so the reader can keep the full context.

Second Page

This second page verifies page navigation and text layer cleanup.

A new selection should cancel any old translation request.

Use the page control in the toolbar to return to the first page.
